

AIFN BLACK 115

DESCRIPTION

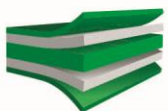

This multilayer film is produced with the use of the latest generation polymers and environmentally friendly color masterbatches, that give the product superior strength, complete opacity and vivid coloration. The product offers unique flexibility and is easy to weld.

APPLICATION

Multilayer black stabilized film for general agricultural use:

- silage,
- shed covers
- produce sorting (approved for contact with food).

AIFN BLACK 115

With a multilayer film, it is possible to have an asymmetrical structure, allowing the combination of different materials advantages in order to ensure efficiency whatever the weather or crop specificities.

The film contains special high-strength polymers which provide excellent mechanical strength.

Our films are guaranteed for several seasons, depending on each case and location. The usual conditions of laying and use are available from Agripolyane and its distributors.
